

DogeGuard

WhitePaper *Lite* v1.0

July 2022

About

DogeGuard is a **DeFi Decentralized Application** that allows you to **speed up the development** of your **dApps** and **smart contracts**.

It is also an advanced **ecosystem** of various projects, thanks to which you will be able to fully plunge into the world of **decentralized finance**.

With **DogeGuard** you will be able to **trade, earn, win** and **develop your own DeFi dApps!**

Also, we at **DogeGuard** are not indifferent to the problems associated with **homeless animals**, and by participating in the **DogeGuard ecosystem** you will be able to **help homeless animals find their family**, as well as our **charity program** will focus on various areas of assistance to animals, the **owners** of the **DogeGuard token** will have the right to vote on the choice of the **direction of charity**.

Our project will be managed by our community.

DOGEGUARD Token

The native token of the DogeGuard ecosystem.

DogeGuard is a modified ERC20 token running on the BNB Chain network created specifically for the DogeGuard ecosystem. Using our token, you will get the opportunity to participate in the DogeGuard ecosystem, earn or win using our smart contracts and determine the DogeGuard development strategy or charity programs by voting as a token holder.

Smart contract address:

0xA36206F31669FF4a982bbDEb8aA2DaE1Ae5B1C4e

The smart contract code of our token is publicly available on bscscan.com

We do not have a pause function and we cannot blacklist addresses, thus the owner of the smart contract cannot disrupt the trading and operation of our token.

Earn with DogeGuard

We offer several smart contracts at once, using which you can earn in cryptocurrency. Each of our smart contracts has an open source code. Any user can make sure that we have not left backdoors in smart contracts for withdrawal of funds. If there is an opportunity to withdraw tokens from a smart contract, these are all tokens except those that are involved in a smart contract. For example, in the Main Staking Contract, we **cannot** withdraw DogeGuard and DogeCoin from a smart contract.

You can find all the information about the statistics and APR of our smart contracts on our website.

Next, consider smart contracts in more detail

Main Staking Contract

Get automatic income in **DogeGuard** and **DOGE** tokens every 4 hours by staking a DogeGuard token.

We have created our smart contract responsible for staking, which is independent of the token and does not load our token with additional commissions. Swaps on a decentralized exchange can be performed by our smart contract under any conditions, while the dividend paying token interface could perform swaps only under certain very rare conditions. Absolutely any amount will be suitable for participation and withdrawal is available at any time when YOU want it.

<https://dogeguard.org/mainstaking> here you can find the current APR, the history of our indexes and more detailed information.

An example of how it works

System of Agreements

Fix the yield in BNB up to **149.65% APR** and get an additional reward from LP

When you invest DogeGuard tokens and create an agreement, our smart contract converts the received tokens into LP DogeGuard/BNB tokens, thereby fixing this value to BNB. If the price of our token decreases, when the agreement is closed, you will receive more DogeGuard tokens than you invested initially, and if the price has increased, you will receive fewer DogeGuard tokens, since your investment is equivalent to BNB. But at the same time, you will receive a fixed reward in DogeGuard at the time of signing the agreement! Also, while the staking is going on, your LP tokens inside the smart contract will receive rewards from the trade turnover with our token, this is + *LP APR*

<https://dogeguard.org/agreementsystem> here you can find the current APR and more detailed information.

An example of how it works

LP Farm

Get rewarded for staking **LP DogeGuard/BNB** tokens every block of the blockchain

The **APR** in our farm is calculated depending on the number of participants in our farm and the number of LP tokens staked.

+ **LP APR** - is a reward from your LP tokens, every time a deal is made to buy or sell DogeGuard tokens on PancakeSwap - you get a percentage from this.

<https://dogeguard.org/lpstaking> here you can find the current APR and more detailed information.

Thanks to PancakeSwap for using the base for our smart contract according to the MIT license.

DogeGuard IDO

IDO protects users who want to participate in the project. Using our IDO smart contract, the BNB received is automatically instantly sent to the liquidity pool, and DogeGuard tokens are sent to our user. Thereby ensuring the security of the transaction and guaranteeing the inflow of liquidity into our project. In addition, **50%** of all LP tokens received by our smart contract IDO will be automatically burned, thereby **locking liquidity** in our project **forever!**

IDO DogeGuard has $Id = 0$.

To buy our token on IDO, visit this page - <https://dogeguard.org/ido>, connect your Web3 wallet to our site, select the desired purchase amount and confirm the transaction. The liquidity pool will be instantly replenished with the BNB received, and you will immediately receive your DogeGuard tokens to your wallet without paying the internal commission of our token.

If you are new to the crypto world, visit our page, where we have tried to describe in detail how you can get started - <https://dogeguard.org/docs/howgetstarted>

Our IDO was created on our unique platform, you can find detailed information about how it works in our documentation - <https://dogeguard.org/docs>

Partner Program

Invite your friends and get a stable income in crypto together!

You can earn money with DogeGuard without any investments, just by inviting your friends to our project.

For example, with any purchase using your referral link, you will receive 3% of your friend's purchase instantly in BNB to your wallet that you specify in the link.

You can find detailed information here - <https://dogeguard.org/referral>

Tokenomics

Our project has a complex developed economy, we have tried to describe it in detail below.

Fees (9%)

1%

Burns

-

Tokens are sent during the transaction to the [dEaD address](#)

-

Burning tokens causes deflation, which increases the rate of our token in the long term.

2%

Management

-

1% for the development of the project
0.6% proportionally 1 : 1 with BNB to the liquidity pool
0.4% for charity

-

These funds are sent to the [management's smart contract](#), after which they are distributed according to the percentages.

We have taken out this functionality separately from the token in order for token holders to make transactions with a lower cost of commissions.

6%

Main staking

-

3% DogeCoin
3% DogeGuard

-

These funds are distributed among all participants of the [Main Staking Contract](#)

Initial Total Supply: 1 000 000 000 000 DogeGuard

The actual value of tokens in circulation will be constantly reduced due to the token burning commission and our BuyBack&Burn Politics

More detailed information about the distribution of tokens is available on our token page - <https://dogeguard.org/token>

BuyBack&Burn Politics

DogeGuard will constantly make a DogeGuard token BuyBack with DEX throughout the entire time in order to increase our reserves and stimulate the market.

Also, we have created a targeted profit-sharing strategy among all DogeGuard holders. We have created a [BuyBack smart contract](#) that will automatically redeem DogeGuard tokens from the exchange and burn them (by sending them to the [dEaD address](#)), thereby distributing the profit among all holders due to the growth of the token rate.

For example, every time someone buys an NFT or creates an IDO on our [IDO Launcher](#), part of the funds is sent to a smart contract for a BuyBack and follow burning.

This is just the beginning of the project...

DogeGuard has very big plans and goals for the development of this project, we do not plan to stop developing, we will constantly create new projects for our ecosystem and improve what we already have.

We also have big plans related to our charitable goals. Our main charitable goal is to gather like-minded people and open a network of our own shelters to help homeless animals (especially dogs). We will also provide free veterinary care to those who need it.
